

Hack 0.0 (template)

Computer Science I

Department of Computer Science & Engineering

University of Nebraska–Lincoln

Introduction

Hack session activities are small weekly programming assignments intended to get you started on full programming assignments. Collaboration is allowed and, in fact, *highly encouraged*. You may start on the activity before your hack session, but during the hack session you must either be actively working on this activity or *helping others* work on the activity. You are graded using the same rubric as assignments so documentation, style, design and correctness are all important.

Rubric

Category	Point Value
Style	2
Documentation	2
Design	5
Correctness	16
Total	25

Problem Statement

input

your output should look something like the following:

Instructions

- You are encouraged to collaborate any number of students before, during, and after your scheduled hack session.
- Design at least 3 test cases *before* you begin designing or implementing your program. Test cases are input-output pairs that are known to be correct using means other than your program.
- Include the name(s) of everyone who worked together on this activity in your source file's header.
- Name your program `TODO.c`, and turn it in via webhandin, making sure that it runs and executes correctly in the webgrader. Each individual student will need to hand in their own copy and will receive their own individual grade.
